

CLAIMS

1 1. An interior design system, comprising:
2 a user interface configured to display a plurality of interior design components;
3 and
4 logic configured to receive a user selection of one of the components and
5 display the selected component in the user interface, the logic further configured to
6 receive a user input, via the user interface, the input related to a characteristic of the
7 selected component.

1 2. The system of claim 1, wherein the logic is further configured to
2 receive a dimension user selection, the logic further configured to size the component
3 displayed to the user interface in accordance with the dimension received.

1 3. The system of claim 2, wherein the logic is further configured to
2 display to the user interface a plurality of designs corresponding to fabric swatches,
3 the logic further configured to receive as input from the user a desired fabric selection
4 for the selected component.

1 4. The system of claim 3, wherein the logic is further configured to
2 display the components exhibiting the desired fabric selection.

1 5. The system of claim 1, wherein the logic is further configured to
2 display a plurality of accessories, the logic further configured to receive from the user
3 a desired accessory selection.

1 6. The system of claim 5, wherein the logic is further configured to
2 display the desired accessory selection relative to a selected component.

1 7. The system of claim 1, wherein the selected component is a window
2 and the characteristics of the selected component are window treatments.

1 8. The system of claim 7, wherein the logic is further configured to
2 receive at least one value indicative of dimensions relative to the window treatments.

1 9. The system of claim 8, wherein the logic is further configured to
2 calculate, based upon the value, a value indicative of yardage related to the window
3 treatments.

1 10. The system of claim 9, wherein the logic is further configured to
2 calculate, based upon the yardage, the cost in material for the window treatments.

1 11. The system of claim 10, wherein the logic is further configured to
2 calculate labor cost associated with the window treatments.

1 12. An interior design method, comprising:
2 displaying a plurality of interior design components via a user interface;
3 receiving a user selection of one of the components;
4 displaying the selected component in the user interface; and
5 receiving a plurality of user inputs from a user, via the user interface, the
6 inputs related to characteristics of the selected component.

1 13. The method of claim 12, further comprising the steps of:
2 receiving a value indicative of a dimension related to the component; and
3 displaying the component to the user interface in accordance with the
4 dimension received.

1 14. The method of claim 13, further comprising the steps of:
2 displaying to the user interface a plurality of designs corresponding to fabric
3 swatches; and
4 receiving as input from the user a desired fabric selection for the selected
5 component.

1 15. The method of claim 14, further comprising the step of displaying the
2 component exhibiting the desired fabric selection.

1 16. The method of claim 15, further comprising the steps of:
2 displaying a plurality of accessories; and
3 receiving from the user a desired accessory selection.

1 17. The method of claim 16, wherein the logic is further configured to
2 display the desired accessory selection relative to a selected component.

1 18. The method of claim 12, wherein the selected component is a window
2 and the characteristics of the selected component are window treatments.

1 19. The method of claim 18, further comprising the step of receiving a first
2 value indicative of dimensions relative to the window treatments.

1 20. The method of claim 19, further comprising the step of calculating,
2 based upon the first value, a second value indicative of yardage related to the window
3 treatments.

1 21. The method of claim 20, further comprising the step of calculating the,
2 based upon the yardage, the cost in material for the window treatments.

1 22. The system of claim 21, further comprising the step of calculating a
2 third value indicative of labor cost associated with the window treatments.

1 23. An interior design system, comprising:
2 a display screen;
3 a user interface comprising a workshop configured for display to the display
4 screen;
5 a template of interior design components configured for display in the
6 workshop of the user interface;
7 logic configured to receive measurement values, via the user interface,
8 corresponding to a room for which design is contemplated, the measurement values
9 corresponding to a plurality of dimensions relative to the room, the logic further
10 configured to receive an input from a user related to a selected interior design
11 component from the template, the logic further configured to display the component in
12 the workshop corresponding to a position relative to the dimensions of the room.
